eBusiness Product Gold Award

MSC RFID Solution wins Hong Kong ICT Awards

We are proud to announce that MSC is the latest winner of the prestigious Hong Kong ICT Gold Award for the eBusiness Product category. Presided by the honorable Financial Secretary Henry Tang, MSC was selected among hundreds of applicants as a winner. The ICT Awards is a top award supported by the Government's Chief Information Officer and the Government's Special Administrative Region.

Comments from HK ICT Judging Panel - "Elegant use of modern technology to handle traditionally intractable problems. Real time information shows who is sewing which bundle, allowing fast resolution of bottlenecks, a reduced WIP inventory, and the rapid tracing of quality issues to their source. Productivity is increased, and labour costs are significantly reduced, and valuable industrial engineering information can readily be obtained from the system."

Vincent Chan, CEO of MSC, "This is a clear indicator that the HK government recognizes the importance of a breakthrough technology like this for the apparel industry and its importance in helping apparel companies to continue to be competitive in the apparel space. I encourage apparel companies to take a serious look at how this can immediately benefit their bottom line"

Edmund Lee, GM of Unimix Limited, attests to the value of MSC's solution "In today's world of continual price compression, the transparency provided by MSC's solution is a prerequisite for any corporation to improve efficiency and productivity. Unimix have successfully achieved lower cost per order leveraging this transparency"
